PitchProX Edits for User Role

2. Calibration: Clarify “Suggested Response 1/4”. The teleprompter shows Suggested Response 1/4, but the rep may not understand whether they are expected to read all four, choose one, or whether the system rotates automatically. The UI should

clearly indicate the intended behavior. If only one response is spoken per round, avoid making it look like the rep must manually choose among four unless that is actually required.

3. Update logo in all locations
4. Live Calling: The disclosure notice missing on the screen during the call
5. Live Calling: After the call: The disclosure tab is missing, Objection Tab, Sentiment Tab

PitchProX Edits for Internal Sale Reps Role

Dashboard

Top Sales Rep Table: Column titles: Please display the full title: Conversion Momentum and Prompt Adherence

Performance trends: Add tooltips for:

- Conversion Momentum: Measures positive movement toward a sales conversion based on outcomes such as meetings, trials, follow-ups, and other meaningful next steps.
- Prompt Adherence: Measures how closely your responses follow the strategic intent of PitchProX's real-time prompts during conversations.
- Trust Gain: Measures how much prospect trust improves from the beginning of a conversation to the end, based on PitchProX's trust analysis.
- Quota Progress: Shows your progress toward your assigned sales quota for the current measurement period.

1. Support tickets: Add an option for + New Ticket
2. Change "Cancellations Pending — Requires Action" to Canceled Accounts, for churn recovery, the rep may wish to reach back out to these individuals to reconvert. So should show Cancel Accounts linked to the sales rep when clicked.
3. Calibration: Go back to dashboard does not work
4. Calibration: Clarify "Suggested Response 1/4". The teleprompter shows Suggested Response 1/4, but the rep may not understand whether they are expected to read all four, choose one, or whether the system rotates automatically. The UI should clearly indicate the intended behavior. If only one response is spoken per round, avoid making it look like the rep must manually choose among four unless that is actually required.
5. User: Overview screen: Calibration Status: Reset Calibration: Misaligned.
6. User: Overview screen: Current Usage: This Cycle: Make all on one line.
7. User: Overview screen: Current Usage: This Cycle: Tooltip: Shows how much of your plan's included usage you've used during the current billing period.
8. Dashboard: Can you change to Title case from all CAPS: LEAD TO SUBSCRIPTION
9. Dashboard: Can you change to Title case from all CAPS: Average LEAD TO SUBSCRIPTION increase across all calls.

10. Billing: Credits and adjustments: View all adjustments: the column that allows for the action to delete, please remove the action column. We don't want the employees to be able to remove records.
11. Users: If we added an Add New Customer button we could then link it to the Convert the Customer Page therefore there is a way to add a new customer without having to be on a call.
12. The sales rep platform has the incorrect lead types now in many places.
13. Performance: Pages numbers needed at the bottom of the page of Rep Bonus Performance
14. Dashboard: performance Trend: can you change industry average. For the chart shown, can you make the legend ● **You - - - PitchProX Benchmark, a**nd define it in the tooltip as: **PitchProX Benchmark:** The average performance of qualifying PitchProX calls for this metric. Benchmarks are calculated automatically from aggregated platform data and updated as additional qualifying calls are completed.
15. Update logo in all locations
16. Live Calling: After the call: The transcription tab is missing

Mobile Site

1. Dashboard: Top Sales Rep table is super squeezed together, columns are overlapping
2. Dashboard: Search User table is super squeezed together, columns are overlapping
3. Users: Search filter: User type should be lead type.
4. Live calling: Address should say Company name and it shouldnt be mandatory
5. Live calling: Notifications and the screens overlay each other when scrolling (see video)
6. Live calling: Live calling screen needs to be updated to reflect the web version
7. Live calling: Ai Call Summary screen needs to be updated to reflect the web version
8. Live calling: Disclosure tab missing
9. Lead: Pages numbers needed at the bottom of the page
10. CRM: Pages numbers needed at the bottom of the page
11. Calls: Pages numbers needed at the bottom of the page
12. Support Ticket: Remove the (/) Between Customer and Company
13. Support Ticket:Internal notes and the 4 options at the bottom are missing
14. Performance: Write out Free Trial Conversion
15. Performance: Pages numbers needed at the bottom of the page of upgrade intelligence
16. Performance: Pages numbers needed at the bottom of the page of Rep Bonus Performance
17. Performance: Pages numbers needed at the bottom of the page of At-Risk Accounts
18. Mail: Draft should be editable
19. Mail: Add a ticket links to send an email instead of support ticket
20. Support Tickets: Search bar is missing
21. Billing: Remove the (/) Between Customer and Company
22. Billing: Invoice Management click it to show invoice history

23. Billing: Subscription controls and credit and adjustments match the web dashboard (Tables also overlap)
24. Calibration: seasons needs to say session status
25. Calibration: Dashboard doesnt link to dashboard
26. Users: Click a name: Call History tab: Call History: The lead type of the users should be used. If you're inside the user tab, then their call history will be sourced by user lead types. Also the lead types in the column will be user lead types.
27. Users: Click a name: Call History tab: Call History: Company names of the users should be property address If you're inside the user tab, then their property address will be sourced by users.
28. Users: Click a name: Call History tab: Call History: Click a name: The profile should reflect that of a lead/prospect (homeowner) not an agent
29. Users: Click a name: Call History tab: follow up queue: The lead type of the users should be used. If you're inside the user tab, then their call history will be sourced by user lead types. Also the lead types in the column will be user lead types.
30. Users: Click a name: Call History tab: follow up queue: Company names of the users should be property address If you're inside the user tab, then their property address will be sourced by users.
31. Users: Click a name: Call History tab: follow up queue: Click a name: The profile should reflect that of a lead/prospect (homeowner) not an agent
32. Users: Click a name: Call History tab: Outcomes should be user outcomes for sorting
33. Users: Click a name: Call History tab: Outcomes should be user outcomes for column on the table
34. Users: Click a name: Usage & Activity tab: Call History: The lead type of the users should be used. If you're inside the user tab, then their call history will be sourced by user lead types. Also the lead types in the column will be user lead types.
35. Users: Click a name: Usage & Activity tab: Call History: Company names of the users should be property address If you're inside the user tab, then their property address will be sourced by users.
36. Users: Click a name: Usage & Activity tab: Call History: Click a name: The profile should reflect that of a lead/prospect (homeowner) not an agent
37. Users: Click a name: Usage & Activity tab: follow up queue: The lead type of the users should be used. If you're inside the user tab, then their call history will be sourced by user lead types. Also the lead types in the column will be user lead types.
38. Users: Click a name:Usage & Activity tab: follow up queue: Company names of the users should be property address If you're inside the user tab, then their property address will be sourced by users.
39. Users: Click a name: Usage & Activity tab: follow up queue: Click a name: The profile should reflect that of a lead/prospect (homeowner) not an agent
40. Users: Click a name: Usage & Activity tab: Outcomes should be user outcomes for sorting
41. Users: Click a name: Usage & Activity tab: Outcomes should be user outcomes for column on the table

42. Users: Overview: Subscription Plan: View Billing Details: Link it to the Billing details Page
43. Users: Overview: Current Usage: Manage Limits: Link it to Subscription and Billing Page: Manage Subscription Usage and Credit section
44. Users: Overview: Billing Status: Link it to Billing Page: Invoice Management section
45. Users: Overview: Calibration Status: pop up for reset calibration
46. Users: Overview: Quick Actions: View Activity Log: Link it to Usage and Activity Page
47. Users: Subscription and Billing: MANAGE SUBSCRIPTION USAGE & CREDITS: ADD CALLS: Make it cap at 50. (Not to allow for more than 50), and also add a please confirm this action before it automatically adds to the balance
48. Users: Subscription and Billing: MANAGE SUBSCRIPTION USAGE & CREDITS: ADD Reports: Make it cap at 50. (Not to allow for more than 50), and also add a please confirm this action before it automatically adds to the balance
49. Users: Subscription and Billing: MANAGE SUBSCRIPTION USAGE & CREDITS: Apply Discount or Credit: Make it cap at 50. (Not to allow for more than 50), and also add a please confirm this action before it automatically adds to the balance
50. Users: Subscription and Billing: Invoice Settings: Add an edit option
51. Users: Reports: Average Score: Alignment is off on the +8 Points
52. Users: Reports: Call Analysis section: View full report: Remove Recorded Audio & Highlights: We can replace with the transcription and analysis. But we don't want to save recordings.
53. Users: Reports: Call Analysis section: Add internal notes is not working
54. Users: Calibration: Can you move the Calibration setting box down so there is room to space the other 4 boxes out so they do not look so squeezed together.
55. Support Tickets: Reply to Customer: Can we add to the support tickets messaging "PitchProX AI Suggested Reply" Button directly next to the "Send Reply" Button.The suggested response must remain editable by the support employee before sending. **AI should never automatically send the response.**
56. Update logo in all locations

PitchProX Edits for Super Admin Role

1. Users: Subscription and Billing: MANAGE SUBSCRIPTION USAGE & CREDITS: ADD CALLS: No cap and also add a please confirm this action before it automatically adds to the balance
2. Users: Subscription and Billing: MANAGE SUBSCRIPTION USAGE & CREDITS: ADD Reports: No cap and also add a please confirm this action before it automatically adds to the balance
3. Users: Subscription and Billing: MANAGE SUBSCRIPTION USAGE & CREDITS: Apply Discount or Credit: No cap and also add a please confirm this action before it automatically adds to the balance
4. User: Overview: Quick Actions: Issue Refund: This needs to go to the pop up screen shown in figma.

5. User: Billing and Subscription: Current subscription: Change “extend subscription” to “downgrade subscription”
6. Users: If we added an Add New Customer button we could then link it to the Convert the Customer Page therefore there is a way to add a new customer without having to be on a call.
7. Mail: view all templates: When you click use template it does not pre-populate when it takes you to the next screen.
8. Dashboard: Top Sales rep: When you click name have it direct to the sales rep profile
9. Playbook: Basic Information: Add a section to Name the Author or Creator of the Playbook, if nothing is selected then it will be default to the user creating the playbook. This will change the Robert Herjavec part in the Playbook Preview section.
10. Playbook: Basic Information: I would change Category to something closer to:
    - **Prospecting & Outreach**
    - **Discovery & Qualification**
    - **Objection Handling**
    - **Appointment Setting**
    - **Presentation & Value Building**
    - **Negotiation**
    - **Closing**
    - **Follow-Up & Nurture**
    - **Sales Methodology**
    - **Relationship / Referral**
    - **Retention & Expansion**
11. Playbook: Basic Information: I would change Style dropdown menu to:
    - **Direct**
    - **Consultative**
    - **Relationship-Led**
    - **Insight-Led**
    - **Question-Led**
    - **Advisory**
    - **Persuasive**
    - **Educational**
    - Potentially add:
    - **High-Energy**
    - **Low-Pressure**
12. Playbook: Basic Information: I would change Style to allow for selection of 2 styles at one time.
13. Playbook: Basic Information: Experience level dropdown: Beginner • Beginner–Intermediate • Intermediate • Intermediate–Advanced • Advanced • All Experience Levels
14. Playbook: Basic Information: **Core Focus & Outcomes: Space out so you can see the full option. Feels squeezed.**
15. Playbook: Basic Information: Playbook Details: The uploaded photo should change the image icon on the preview
16. Playbook: Style and voice: Primary Communication Style:

    - Consultative
    - Direct
    - Analytical
    - Expressive
    - Decisive
    - Advisory
    - Insight-Led
    - Question-Led
17. Playbook: Style and voice: **Sentence Style:** I'd change this dropdown to:
    - **Short & Conversational**
    - **Concise & Punchy**
    - **Balanced & Natural**
    - **Detailed & Structured**
    - **Story-Driven**.
18. Playbook: Style and voice: **Formality:** I'd change this dropdown to:
    - **Casual**
    - **Conversational**
    - **Professional**
    - **Executive**
19. Playbook: objections handling: Objection Category
    - **Risk**
      Financial
      Relationship
    - **Logistics**
    - **Identity / Emotional**
20. Playbook: objections handling: edit objection: Objection Category: One important upgrade: allow category overlap, selection of up to two categories
21. Playbook: objections handling: edit objection: Conversation Stage: Conversation Stage must dynamically populate from the playbook's current stage configuration. Include all system/default stages plus any custom stages created by the user earlier in the Playbook Builder. If a stage is subsequently added, renamed, reordered, or removed, the objection-stage options should remain synchronized with the current playbook structure rather than maintaining a separate static list.
22. Playbook: objections handling: edit objection: Conversation Stage: One other improvement: **make Conversation Stage multi-select and an option for any stage**
23. Playbook: objections handling: edit objection: Applicable Lead Types: This should connect directly to the **master PitchProX Lead Type library: Applicable Lead Types must be a searchable multi-select populated from the platform's existing Lead Type library. Users should not manually type lead types. Include an "All Lead Types" option, and automatically include newly created/available lead types in the selector without requiring this screen to be updated manually. Clicking it opens a searchable multi-select containing all available lead types:**
    - Expired Listings
    - Pre-Expired Listings

- FSBO
- Absentee Owners
- Circle Prospecting
- Just Listed
- Just Sold
- Probate
- Trust & Estate
- Pre-Foreclosure
- Foreclosure / REO
- Divorce
- Tax Delinquent
- Vacant Properties
- Investor / Cash Buyers
- Past Clients & Sphere
- **All Lead Types**

24. Playbook: objections handling: edit objection: Sub-Label / Short Classification: I would also rename two labels to Objection Sub-Type.

25. Playbook: objections handling: edit objection: **Conversation Stage**: I would also rename to Applicable Conversation Stages.

26. **Playbook**: Just like the users page for playbook: The landing page when you click the tab and you see the library of playbooks and the option to customize one. We need this as well. When you click a playbook: View details: It should allow for editing. And instead of customize a playbook tab the words should say create a new playbook.
27. Playbook: Resources and Scripts: There is no upload option.I think we need an upload option if someone wants to upload one of these items
28. Playbook: Resources and Scripts: Add resource: Email Templates: It is not clear how these will be implemented
29. Playbook: Resources and Scripts: Add resource: Email Templates: Only one email template should be allowed per resource for easier implementation. For example, requested information email template should not be in the same resource as follow up email template
30. Playbook: Resources and Scripts: Add resource: Follow up: It is not clear how these will be implemented
31. Playbook: Resources and Scripts: Click on a resource: You should be able to edit the upload. There currently isn't any upload option when you click the resource.
32. Playbook: Resources and Scripts: Action to include pin to Resource Library. (The Library is the place when you select import from Library, you'll be able to see it there)
33. Playbook: Resources and Scripts: Import from library: Add a search bar by terms, resource type and added by
34. Playbook: Resources and Scripts: The library should be accessible during all creations of playbooks. The concept is like this, when you create a playbook for a specific field or area and you create another playbook and they have coverlapping resources, you

should be able to select from the pinned resources of any playbook that was created so this removes having to upload the same documents for each playbook.

35. Playbook: Resources and Scripts: Add resource: Add an option to pin to Resource Library.
36. Playbook: Pages: I think there should be a next page option at the bottom right as well, so you don't have to scroll to the top to change tabs.
37. Playbook: Ai Framework Builder: Content Inputs: Tooltip: Choose what information the AI should pay attention to when generating live prompts. For example, you can enable emotional detection to adjust prompts based on how the prospect feels, or disable it if you want the AI to ignore emotions and focus only on what is being said.
38. Playbook: Ai Framework Builder: Response Structure: Click Edit: Customize Response Sequence Tooltip: Control how the AI builds responses to objections. Adjust how much it acknowledges the prospect's concern, introduces a new perspective, communicates value, and guides the conversation toward the next step. For example, you can prioritize empathy before presenting a solution or move more directly toward an appointment when appropriate.
39. Playbook: **AI Prompt Framework:** Playbook Prompt DNA: When You click the landing page should be Core Coaching Philosophy not language.
40. Playbook: **AI Prompt Framework:** Playbook Prompt DNA: Core Coaching Philosophy: Tooltip is in the incorrect location, please adjust it
41. Playbook: **AI Prompt Framework:** Playbook Prompt DNA: Core Coaching Philosophy: Coaching Pillars: Allow for the full text to show on each button option
42. Playbook: **AI Prompt Framework:** Playbook Prompt DNA: Objection Tone: Objection Intensity Handling: Adapt to Emotional Level: Clicking it does not do anything
43. Playbook: **AI Prompt Framework:** Playbook Prompt DNA: Closing style: **Closing Progression Structure: Boxes have text outside of the boxes.**
44. Playbook: **AI Prompt Framework:** Playbook Prompt DNA: follow up style: Comparable or case study and Updated opportunity remove dropdown menu **option.**
45. Playbook: **AI Prompt Framework:** Playbook Prompt DNA: Language Rules: **Special language instructions: Edit option is not working**
46. Playbook: **AI Prompt Framework: Prompt Voice: What is the overall voice of this playbook?: dropdown — keep, but add Balanced / Natural / Conversational**
47. Playbook: **AI Prompt Framework:** Logic and Rules: Escalation Logic: **Manager Request Rule: The text is overlapping the active button**
48. Playbook: Review and Publish: Clicking publish playbook should take you to the playbook library page
49. Playbook: Review and Publish: Can you add under the playbook summary the quality check and score out of 100 and the AI recommendations and or suggestions for improvement
50. Playbook: Review and Publish: The Visibility dropdown should ultimately support:
    - **Private** — creator only
    - **Team Only** — available to the Internal Staff team/workspace

- **Organization** — available across the company/brokerage Internal (Developer note *free implementation for internal sales reps)
- **Marketplace / Published** — only for approved PitchProX-distributed Playbooks

51. Playbook: **AI Prompt Framework: Increase some methodology fields to 500 characters.** I would use **500 characters** for fields that explain an actual methodology or behavioral rule, such as:
    - Strategic Framing instructions
    - Trust-Building instructions
    - Discovery methodology
    - Objection-handling philosophy
    - Closing philosophy
    - Follow-Up methodology
52. Playbook: “Reset to Default” behavior needs confirmation. Multiple locations. Resetting one Playbook DNA area should reset **only that section**, not the entire Playbook.
53. Playbook: Every section should auto-save or clearly show unsaved state.
54. Settings: Missing the Need Help? Tab
55. Settings: Personal information: Email: For all employee roles: The email should just be displayed, not changeable. The Sales Rep would also need to be updated to reflect this as well as any future internal users.
56. Dashboard: Performance trends: Currently it is set on Users. Can there be an option to switch between users and sales reps
57. Dashboard: Top Right: Start a call: Remove button
58. Update logo in all locations
59. Plans and Pricing: Enterprise configuration needs clearer distinction between recurring and one-time amounts. The enterprise modal calculates a Total Due: $5,000, but it also contains pricing contract terms, included seats, extra seats, usage limits, etc. Make sure the UI clearly identifies Monthly Recurring, One-Time, and Due Today instead of letting “Total Due” become ambiguous.
60. Plans and Pricing: **Promo-code restrictions look good, but prevent impossible combinations.** For example, percentage/fixed discount, duration, eligible plans, usage limits and expiration should dynamically validate against one another rather than allowing contradictory promo configurations.
61. Performance Analytics: Clearly define every metric through tooltips. Especially Trial Conversion, Gross Margin, Cost per Trial, Average Revenue per User, AI Cost per Call, Upgrade Opportunity, Risk Score and AI Latency.
    - Free Trial Conversion — Percentage of trial accounts that become paid subscribers within the defined conversion window after the trial begins or ends.
    - Gross Profit Margins — Revenue remaining after subtracting direct costs required to deliver the service, including AI usage, telephony, transcription, payment processing, and other directly attributable service costs. (Does not include general operating expenses unless specifically configured.)

- Cost per Trial — Average direct cost incurred to support one trial account during the selected reporting period, including applicable AI, transcription, telephony, and infrastructure usage.
- Average Revenue per User (ARPU) — Average recurring revenue generated per active paying account during the selected reporting period. (Excludes one-time credits, refunds, and non-recurring charges unless otherwise specified.)
- AI Cost per Call — Average AI-related processing cost for a qualifying live call, including applicable model inference and AI processing expenses. (Does not represent total call delivery cost unless telephony and transcription are explicitly included.)
- **Upgrade Intelligence** — Identifies accounts showing defined usage and account signals that may indicate a need for a higher plan, helping the team prioritize potential upgrade opportunities.
- **Upgrade Likelihood— Estimated likelihood that an account may be ready for a higher plan based on defined signals such as usage, plan-limit activity, team growth, and feature engagement. This is an internal opportunity indicator, not a guaranteed prediction that the customer will upgrade.**
- Risk Score — Internal account-risk indicator based on defined signals such as declining usage, payment issues, inactivity, unresolved support activity, subscription changes, or other configured retention indicators. Higher scores indicate greater observed risk based on available data.
- Queue Latency — Average time a processing request waits in the system queue before processing begins. This measures queue delay only and does not include the actual processing or total end-to-end response time.
- Monthly Recurring Revenue (MRR) — Normalized monthly recurring subscription revenue from active paid accounts. Excludes one-time fees, credits, refunds, taxes, and non-recurring purchases unless specifically included.
- Churn Rate — Percentage of paying accounts that canceled or became inactive during the selected reporting period relative to the eligible paying account base for that period.
- Can we add a box under Churn Rate for **Revenue Churn** and add the tooltip as well. (Revenue Churn — Percentage of recurring revenue lost from cancellations, downgrades, and other recurring-revenue reductions during the selected reporting period.)
- Cost per Call — Average direct platform cost to process and support one qualifying live call. May include telephony, transcription, AI, and infrastructure costs depending on the configured cost model.

    - Customer Acquisition Cost (CAC) — Average acquisition cost required to obtain one new paying customer, based on included sales and marketing acquisition expenses divided by newly acquired customers during the defined period.
    - At-Risk Accounts — Accounts currently showing one or more defined retention-risk signals. Inclusion should be based on documented rules or scoring criteria rather than subjective classification.
62. Billing: Credits/Adjustments need a permanent audit trail. I like that the modal requires customer, adjustment type, amount, reason and approval. Once applied, it should be immutable as a historical transaction. If someone needs to undo it, create a reversing adjustment rather than editing/deleting the original.
63. Billing: **Approval permissions matter.** The modal already shows Super Admin Approval, which is good. Make sure support reps cannot simply issue arbitrary credits because they can access a customer's billing history. Their role may initiate/request an adjustment; authorized roles approve according to your permission structure.
64. Billing: **Billing-cycle changes need proration behavior clearly stated.** I saw Monthly Billing / Annual Billing and an effective date. The modal should tell the admin what financial consequence occurs before confirming—immediate proration, next renewal, credit generated, etc. This is one of those areas where an innocent admin click can create a customer dispute.
65. Billing: when you client a name it should take you to user subscription & billing not user overview.
66. Sales rep: the sales rep table looks squeezed together. Please space out more.
67. Sales rep: Remove the bullet point: prompt adherence, trust gain, quota progress, and last active
68. Sales rep: adjust quotas: if bulk is disabled then adjustment type should be disabled as well
69. Sales rep: adjust quotas: The change percentage should be based on the last saved state vs the overall starting state. Once said, the percentage should become the new baseline.
70. Sales rep: sales leaderboard: Change the rankings to 1st, 2nd and 3rd
71. Sales rep: sales leaderboard: rankings should change based on what is selected: total revenue, lead conversions, calls made, quota attainment
72. Sales rep: when you click a name on the table: Overview: click the graph: Cumulative should be listed under target
73. Sales rep: when you click a name on the table: Overview: Recent Call history: Lead type: Use the internal lead types
74. Sales rep: when you click a name on the table: Overview: Recent Call history: outcomes: use internal outcomes names: Change to subscription Secured.

75. Sales rep: when you click a name on the table: calls:on the table separate duration and outcome, ai score and trust gain
76. Sales rep: when you click a name on the table: reports: Table sorting: All Lead types: This needs to list all internal lead types.
77. Sales rep: when you click a name on the table: reports: Table: Lead types: This needs to list all internal lead types.
78. Sales rep: when you click a name on the table: reports: Need to figure out how the coaching and prompt adherence reports are created.
79. Sales rep: when you click a name on the table: coaching notes: Top focus area: Please show full text. The word handling should not be cut off.
80. Sales rep: when you click a name on the table: coaching notes: table is too squeezed together.
81. Sales rep: when you click a name on the table: coaching notes: clicking a note should show the details and allow you to mark complete. The action of view details should do that same action.
82. Sales rep: when you click a name on the table: coaching notes: table needs x page out of x page at the bottom right of the table.
83. Sales rep: when you click a name on the table: coaching notes: where do the notes go for the sales representative to actually receive and complete them?
84. Compliance and audit: Training logs: expiring soon: make space so the 30 days wording fully shows.
85. Compliance and audit: Training logs: Table: make space so the whole table fully shows.
86. Compliance and audit: Training logs: we need a training material library page
87. Compliance and audit: Training logs: **Department dropdown:** only include:
    - Security
    - Operations
    - HR & People
    - Admin
    - Sales & Growth
    - Support

    Use this same Department list everywhere in the Training section.

88. Compliance and audit: Training logs: **Training Status dropdown:** only include:

- Not Started
- In Progress
- Completed
- Overdue

89. Compliance and audit: Training logs: Change: **Expiring Soon (30 Days)** to: **Due Soon (Next 30 Days)**
90. Compliance and audit: Training logs: Change: **Upcoming Expirations** to: **Upcoming Due Dates**
91. Compliance and audit: Training logs: Change the field label: **Priority** to: **Requirement**
92. Compliance and audit: Training logs: **Requirement dropdown:** only include:
    - Required
    - Recommended
    - Optional
93. Compliance and audit: Training logs: Set **Allow reassignment if already completed** to **OFF by default**.
94. Compliance and audit: Training logs: If **Allow reassignment if already completed** is turned ON, create a new assignment record. Do not overwrite the previous completed assignment.
95. Compliance and audit: Training logs: Keep **Training** as multi-select in Bulk Assign.
96. Compliance and audit: Training logs: If 3 Trainings are assigned to 10 employees, show:
    - **30 Assignments** in the Assignment Summary.
97. Compliance and audit: Training logs: For employees assigned multiple Trainings, allow these status displays:
    - 1 of 3 Completed
    - 2 of 3 Completed
    - 3 of 3 Completed
    - Mixed
    - Overdue
98. Compliance and audit: Training logs: Use these exact definitions throughout the Training system:
    - **Training** = complete course
    - **Training Material** = individual PDF, Document, or Video inside the Training
99. Compliance and audit: Training logs: In **Bulk Assign**, only show complete Trainings in the Training selector. Do not show individual Training Materials.
100. Compliance and audit: Training logs: Remove the **Format** filter from Bulk Assign if complete Trainings can contain more than one material format.
101. Compliance and audit: Training logs: Anywhere a material format is displayed, only use:
    - PDF
    - Document

- Video

102. Compliance and audit: Training logs: Remove these labels wherever they appear:
    - PDF Guides
    - PDF Resources
    - Doc
    - Documents
103. Compliance and audit: Training logs: Replace all document-format labels with:
    - **Document**
104. Compliance and audit: Training logs: In **Export Training Report**, change:
    - **Choose Training** to: **Report Type**

if the dropdown contains report names instead of Training names.

105. Compliance and audit: Training logs: If **Training Assignment Report** is currently the only available report type, remove the Report Type dropdown and display: **Training Assignment Report** as the selected report type.

106. Compliance and audit: Training logs: Add a separate **Training** filter on the Export screen.
107. Compliance and audit: Training logs: **Training filter:** include:
    - All Trainings
    - then every active Training by name
108. Compliance and audit: Training logs: **Status filter:** only include:
    - All Statuses
    - Not Started
    - In Progress
    - Completed
    - Overdue
109. Compliance and audit: Training logs: **Department filter:** only include:
    - All Departments
    - Security
    - Operations
    - HR & People
    - Admin
    - Sales & Growth
    - Support
110. Compliance and audit: Training logs: Add a **Date Range** selector to Export Training Report.
111. Compliance and audit: Training logs: Remove **Score** from Export Training Report unless quiz/test/assessment scoring is currently implemented.

112. Compliance and audit: Training logs: Change: **Provide on completion** to: **Issue certificate on completion**
113. Compliance and audit: Training logs: If certificate expiration is **not currently implemented**, remove all certificate-expiration wording.
114. Compliance and audit: Training logs: If certificate expiration **is currently implemented**, add:
Certificate Validity

with only:

- Does Not Expire
- 6 Months
- 1 Year
- Custom

115. Compliance and audit: Training logs: In **Manage Categories**, do not allow immediate deletion of a category that contains Trainings.
116. Compliance and audit: Training logs: If a category contains Trainings and the admin clicks Delete, require:
    - **Move existing Trainings to:** [Category dropdown]

before deletion can be completed.

117. Compliance and audit: Training logs: Do not allow duplicate Category names. Treat capitalization as the same name.
118. Compliance and audit: Training logs: Make the dashboard status totals use exactly:
    - Not Started
    - In Progress
    - Completed
    - Overdue
119. Compliance and audit: incident management: Table: make space so the whole table fully shows.
120. Compliance and audit: incident management: Table: Missing: all incidents, escalated tickets, investigating, resolved tabs
121. Compliance and audit: incident management: Remove `AI Ethics & Governance` from the Compliance & Audit left navigation.
122. Compliance and audit: incident management:Change the **Category** dropdown in **Report New Incident** to only include:
    - Security Incident
    - Unauthorized Access
    - Data Privacy / Exposure

- Payment / Billing Abuse
- Compliance / Policy Violation
- System / Service Outage
- Other

123. Compliance and audit: incident management: Use this exact same Category list everywhere Incident Categories are shown or filtered. Do not maintain a separate list for the filter.
124. Compliance and audit: incident management: Change the **All Categories** filter to include:
    - All Categories
    - Security Incident
    - Unauthorized Access
    - Data Privacy / Exposure
    - Payment / Billing Abuse
    - Compliance / Policy Violation
    - System / Service Outage
    - Other
125. Compliance and audit: incident management: Remove the current inconsistent category labels:
    - Payment Abuse
    - Data Leakage
    - Policy Breach
    - System Downtime
126. Compliance and audit: incident management: Change the **Severity** dropdown to only include:
    - Critical
    - High
    - Medium
    - Low
127. Compliance and audit: incident management: Keep the **All Severity** filter with:
    - All Severity
    - Critical
    - High
    - Medium
    - Low
128. Compliance and audit: incident management:Change the **Status** dropdown/filter to only include:
    - Open
    - Investigating

- Resolved
- Closed

129. Compliance and audit: incident management: Remove **Solved** everywhere. Do not have both `Solved` and `Resolved`.
130. Compliance and audit: incident management: Change the **Incident Summary** chart to use only:
    - Open
    - Investigating
    - Resolved
    - Closed
131. Compliance and audit: incident management: Make the Incident Summary status counts total exactly the same number as **Total Incidents**.
132. Compliance and audit: incident management: Change the KPI:
    - **Open Incidents** to: **Active Incidents**

    Calculate Active Incidents as:

    - Open + Investigating
133. Compliance and audit: incident management: Calculate **Critical / High** using only active incidents with:
    - Critical severity
    - High severity
134. Compliance and audit: incident management: Keep:
    - **Resolved This Month**

    and count incidents resolved or closed during the selected month only once per incident.

135. Compliance and audit: incident management: Calculate **Avg. Resolution Time** from:
    - incident reported timestamp
    - to resolved timestamp
136. Compliance and audit: incident management: Change:
    - **Incidents by Category** to: **Top Incident Categories**

if the card will continue showing only the top categories instead of every category.

137. Compliance and audit: incident management: Change the Report New Incident field: **Incident Date & Time** to: **Incident Occurred At**
138. Compliance and audit: incident management: When an incident is submitted, automatically create a separate read-only:
    - **Reported At**

timestamp using the actual submission date and time.

139. Compliance and audit: incident management: Keep **Reported By** automatically populated with the logged-in user. Make this field read-only.
140. Compliance and audit: incident management: When **Submit Incident** is clicked, set the initial Status to:
    - **Open**
141. Compliance and audit: incident management: When an authorized incident owner begins the investigation, change Status to:
    - **Investigating**
142. Compliance and audit: incident management: In **All Owners**, only include users who have permission to manage incidents. Do not list every employee.
143. Compliance and audit: incident management: In the Incident detail screen, **Assigned To** must only allow users with Incident Management permission.
144. Compliance and audit: incident management: Require all three fields before **Submit Investigation** can be completed:
    - Investigation Findings
    - Actions Taken
    - Final Conclusion
145. Compliance and audit: incident management: When **Submit Investigation** is completed, automatically change Status from:
    - Investigating
    - to **Resolved**
146. Compliance and audit: incident management: Change:
    - **Investigation date** to: **Investigation Completed At**
147. Compliance and audit: incident management: Automatically populate **Investigation Completed At** when Submit Investigation is completed. Do not make this a manually selected date.
148. Compliance and audit: incident management:Automatically populate **Investigated By** with the authorized user who submits the investigation.
149. Compliance and audit: incident management: After an incident is **Resolved**, provide:
    - **Close Incident**

as the next status action.

150. Compliance and audit: incident management: When **Close Incident** is selected, change Status to:
    - **Closed**

151. Compliance and audit: incident management: Allow a Closed or Resolved incident to be reopened only by an authorized Incident Management user. Reopening should change Status to:
    - **Investigating**
152. Compliance and audit: incident management: Remove the start a call at the top right of the page.
153. Compliance and audit: access records: make space so the onboarding in progress wording fully shows.
154. Compliance and audit: access records: make space so the arrow on the offboarding pending users and the arrow are on the same line.
155. Compliance and audit: access records: **Access Records role dropdown:** only include:
    - All Roles
    - Super Admin
    - Admin
    - Manager
    - Sales Rep
    - Support Assistant
    - User
156. Compliance and audit: access records: Change: **All Status** to: **All Statuses**
157. Compliance and audit: access records: **MFA Status dropdown:** only include:
    - All MFA Statuses
    - Enabled
    - Disabled
158. Compliance and audit: access records: Change the Access Records tabs from:
    - All
    - Pending Invitations
    - In Progress
    - Completed
    - Expired Invites

To:

    - All
    - Pending Invitations
    - Onboarding In Progress
    - Active
    - Offboarding Pending
    - Expired Invites
159. Compliance and audit: access records: Remove the **Completed** tab.

160. Compliance and audit: access records: Clicking **View In Progress users** must open/filter:
    - **Onboarding In Progress**
161. Compliance and audit: access records: Clicking **View Offboarding Pending users** must open/filter:
    - **Offboarding Pending**
162. Compliance and audit: access records: In **Audit Logs**, keep these category tabs only:
    - All Logs
    - User Management
    - Billing & Payments
    - Security
    - System
    - Compliance
    - Data Changes
163. Compliance and audit: access records: **Audit Category dropdown:** only include:
    - All Categories
    - User Management
    - Billing & Payments
    - Security
    - System
    - Compliance
    - Data Changes
164. Compliance and audit: access records: Change the Category dropdown option:
    - **Billing** to: **Billing & Payments**
165. Compliance and audit: access records: Make the Category dropdown and category tabs synchronized. Selecting **Security** in either place must apply the same Security filter.
166. Compliance and audit: access records: Remove the duplicate filter dropdowns above the Audit Logs table:
    - All Actions
    - All Entities
    - All Users
    - All IP Addresses
167. Compliance and audit: access records: Keep the right-side **Filters** panel as the main Audit Logs filter area.
168. Compliance and audit: access records: In the right-side Filters panel, include these fields in this order:

- Date Range
- Category
- Action
- Entity
- User
- IP Address

169. Compliance and audit: access records: **Action dropdown:** for the current event set, include:
    - All Actions
    - Login Success
    - Credits Added
    - Role Updated
    - API Key Created
    - Policy Published
    - Bucket Policy Changed
    - 2FA Enforced
    - Invoice Adjusted
    - Schema Updated
170. Compliance and audit: access records: **User dropdown:** include:
    - All Users
    - then every current user with Audit Log visibility
171. Compliance and audit: access records: **Entity dropdown:** include:
    - All Entities
    - User
    - Account
    - Invoice
    - API Key
    - Policy
    - Storage Bucket
    - Database Schema
172. Compliance and audit: access records: Change the current **Credits Added** entity from: Sales to: **Account**
173. Compliance and audit: access records: For **Credits Added**, use:
    - Category: Billing & Payments
    - Entity: Account
174. Compliance and audit: access records: For **Invoice Adjusted**, use:
    - Category: Billing & Payments
    - Entity: Invoice
175. Compliance and audit: access records: For **Role Updated**, use:
    - Category: User Management

- Entity: User

176. Compliance and audit: access records: For **Login Success**, use:
    - Category: Security
    - Entity: User
177. Compliance and audit: access records: For **API Key Created**, use:
    - Category: Security
    - Entity: API Key
178. Compliance and audit: access records: For **2FA Enforced**, use:
    - Category: Security
    - Entity: User
179. Compliance and audit: access records: For **Policy Published**, use:
    - Category: Compliance
    - Entity: Policy
180. Compliance and audit: access records: For **Bucket Policy Changed**, use:
    - Category: System
    - Entity: Storage Bucket
181. Compliance and audit: access records: For **Schema Updated**, use:
    - Category: Data Changes
    - Entity: Database Schema
182. Compliance and audit: access records: Keep these Audit Log table columns:
    - Time
    - User
    - Action
    - Entity
    - Entity ID
    - IP Address
    - Details
183. Compliance and audit: access records: Add these Audit KPI cards:
    - Total Events
    - User Management
    - Billing & Payments
    - Security Events
    - System Changes
    - Compliance Events
    - Data Changes
184. Compliance and audit: access records: Calculate **Total Events** from all six audit categories:
    - User Management
    - Billing & Payments
    - Security

- System
- Compliance
- Data Changes

185. Compliance and audit: access records: Do not allow the four existing category cards to equal the full Total Events if Compliance and Data Changes also contain events.
186. Compliance and audit: access records: Change: **Include full metadata & client headers** to: **Include metadata & client context**
187. Compliance and audit: access records: Audit Log exports must never include:
    - Passwords
    - Authentication tokens
    - Session tokens
    - API secrets
    - Authorization headers
    - Cookies
    - Secret keys
188. Compliance and audit: access records: Keep **IP Address** searchable as a text field.
189. Compliance and audit: access records: Keep **Date Range** as a date-range selector.
190. Compliance and audit: access records: Keep the current Audit Log pagination.
191. Compliance and audit: access records: Keep:

- Recent Access Changes
- Search
- Export
- Audit Log Details

192. Compliance and audit: evidence repository: move evidence type and recent uploads to below the table so there is room for everything to show. The upload evidence shouldn't be hovering over the table header columns
193. Compliance and audit: evidence repository: Remove **AI Ethics & Governance** from the Compliance & Audit left navigation.
194. Compliance and audit: evidence repository: Change:**Total Evidence Items** to:**Total Evidence**
195. Compliance and audit: evidence repository: Change the evidence Status filter from: **All Status** To: **All Statuses**
196. Compliance and audit: evidence repository: **Status dropdown:** only include:
    - All Statuses
    - Draft
    - Under Review

- Needs Changes
- Verified
- Expired
- Archived

197. Compliance and audit: evidence repository: Set a new uploaded evidence item to:
    - **Under Review**

when **Upload Evidence** is selected.

198. Compliance and audit: evidence repository: Set an evidence item to:
    - **Draft**

when **Save as Draft** is selected.

199. Compliance and audit: evidence repository: When an authorized reviewer verifies evidence, change Status to:
    - **Verified**
200. Compliance and audit: evidence repository: When a reviewer returns evidence for correction, change Status to:
    - **Needs Changes**
201. Compliance and audit: evidence repository: When the evidence expiration date passes, automatically change Status to:
    - **Expired**
202. Compliance and audit: evidence repository: Change:
    - **Trust Criteria** everywhere to: **Trust Service Criteria**
203. Compliance and audit: evidence repository: **Trust Service Criteria:** allow multi-select.
204. Compliance and audit: evidence repository: **Trust Service Criteria options:** only include:
    - Security
    - Availability
    - Confidentiality
    - Processing Integrity
    - Privacy
205. Compliance and audit: evidence repository: Add this field to **Upload Evidence**:
    - **Associated Controls**
206. Compliance and audit: evidence repository: Add the same **Associated Controls** field to **Edit Evidence**.

207. Compliance and audit: evidence repository: **Associated Controls:** make this a multi-select field.
208. Compliance and audit: evidence repository: Populate **Associated Controls** only with controls that currently exist in the **SOC 2 Readiness** control library.
209. Compliance and audit: evidence repository: Change:
    - **All Criteria** To: **All Trust Service Criteria**
210. Compliance and audit: evidence repository: Add this field to Upload Evidence:
    - **Evidence Owner (Default Evidence Owner to the user uploading the evidence)**
211. Compliance and audit: evidence repository: **Evidence Owner dropdown:** only include users with permission to manage Compliance & Audit evidence.
212. Compliance and audit: evidence repository: Change:
    - **Expiry Date** to: **Evidence Expiration**
213. Compliance and audit: evidence repository: Under Evidence Expiration, only include:
    - Does Not Expire
    - Expires On
214. Compliance and audit: evidence repository: Set **Does Not Expire** as the default.
215. Compliance and audit: evidence repository: If **Expires On** is selected, require an expiration date.
216. Compliance and audit: evidence repository: Change:
    - **Description / Verification Notes** To: **Description / Supporting Notes**
217. Compliance and audit: evidence repository: Add a separate reviewer-only field:
    - **Verification Note**
218. Compliance and audit: evidence repository: In the evidence details screen, show:
    - Evidence Name
    - Status
    - Evidence Owner
    - File Type / Size
    - Associated Controls
    - Trust Service Criteria
    - Evidence Period
    - Evidence Expiration
    - Uploaded By
    - Uploaded At
    - Last Updated
    - Verified By

- Verified At
- Verification Note
- Current Version

219. Compliance and audit: evidence repository: Automatically populate:
    - Uploaded By
    - Uploaded At
220. Compliance and audit: evidence repository: Automatically populate:
    - Verified By
    - Verified At

when evidence is verified.

221. Compliance and audit: evidence repository: Do not allow **Verified By** or **Verified At** to be entered manually.
222. Compliance and audit: evidence repository: Change:
    - **Replace current file (Optional)** to: **Upload New Version (Optional)**
223. Compliance and audit: evidence repository: Do not overwrite the existing file when a new version is uploaded.
224. Compliance and audit: evidence repository: For **Draft** evidence, available actions should be:
    - Edit
    - Submit for Review
    - Delete Draft
225. Compliance and audit: evidence repository: For **Under Review** evidence, available reviewer actions should be:
    - Verify Evidence
    - Request Changes
226. Compliance and audit: evidence repository: For **Needs Changes** evidence, available actions should be:
    - Edit
    - Resubmit for Review
227. Compliance and audit: evidence repository: For **Verified** evidence, available actions should be:
    - View
    - Download
    - Create New Version
    - Archive
228. Compliance and audit: evidence repository: For **Expired** evidence, available actions should be:
    - View
    - Download

- Create New Version
- Archive

229. Compliance and audit: evidence repository: Remove permanent **Delete Evidence** for:
    - Under Review
    - Needs Changes
    - Verified
    - Expired
230. Compliance and audit: evidence repository: Only allow permanent deletion for:
    - Draft
231. Compliance and audit: evidence repository: Change permanent deletion of submitted evidence to:
    - **Archive Evidence**
232. Compliance and audit: evidence repository: Archived evidence must remain available in the audit history.
233. Compliance and audit: evidence repository: Make **Verified Evidence** count only records with Status:
    - Verified
234. Compliance and audit: evidence repository: Exclude Archived records from:
    - Total Evidence
    - Verified Evidence
    - Evidence by Type
    - Expiring Soon
235. Compliance and audit: evidence repository: Change the table column:
    - **Control ID** To: **Associated Controls**
236. Compliance and audit: evidence repository: If more than one Control is mapped, display:
    - first Control ID + `+X more`
237. Compliance and audit: evidence repository: Search must match:
    - Evidence Name
    - Control ID
    - Evidence Owner
    - Evidence ID
238. Campaigns and Journeys: Campaigns & Journeys must target PitchProX users/customers, not the user's real-estate leads.
239. Campaigns and Journeys: In the **Segments** section, change every reference from: Lead / Leads to: **User / Users**
240. Campaigns and Journeys: Remove these fields/filters from Segments:
    - Lead Type

- Lead Status
- Outcome
- Last Connected
- Appointment Set
- Follow-Up
- FSBO
- Expired Listing
- Pre-Expired

241. Campaigns and Journeys: Replace the Segments user table columns with:
    - User Name
    - Email
    - Plan
    - Subscription Status
    - Trial Status
    - Call Usage
    - Calibration Status
    - Payment Status
    - Last Login
    - Signup Date
    - Segment
242. Campaigns and Journeys: Change **Create New Segment** so the first field is:
- **Segment Type**
243. Campaigns and Journeys: **Segment Type dropdown:** only include:
    - Dynamic
    - Static
244. Campaigns and Journeys: Set **Dynamic** as the default Segment Type.
245. Campaigns and Journeys: For a **Dynamic Segment**, remove the current manual:
    - `3 leads selected`
    - `Add more leads`

section.

246. Campaigns and Journeys: For a Dynamic Segment, replace it with:
    - **Entry Rules**
247. Campaigns and Journeys: Add:
    - **Match ALL conditions**
    - **Match ANY conditions**

as the rule logic options.

248. Campaigns and Journeys: **Dynamic Segment rule field dropdown:** include:
    - Plan
    - Subscription Status
    - Trial Status
    - Trial Start Date
    - Trial End Date
    - Call Usage %
    - Calls Remaining
    - Calibration Status
    - Payment Status
    - Last Login
    - Last Call Date
    - Signup Date
    - User Tag
    - Email Engagement
    - Feature Usage
249. Campaigns and Journeys: For percentage/numeric rules, include operators:
    - Equals
    - Greater Than
    - Greater Than or Equal To
    - Less Than
    - Less Than or Equal To
250. Campaigns and Journeys: For status/text rules, include:
    - Is
    - Is Not
    - Contains
    - Does Not Contain
251. Campaigns and Journeys: For date-based rules, include:
    - Before
    - After
    - Within Last
    - More Than X Days Ago
    - Within Next X Days
252. Campaigns and Journeys: Dynamic Segment membership must update automatically when a user begins or stops matching the Segment rules. (Do not require an admin to manually add a user to a Dynamic Segment.)
253. Campaigns and Journeys:
254. Campaigns and Journeys: Keep **Static Segment** only for cases where the admin intentionally wants to select specific users manually.
255. Campaigns and Journeys: Rename:

    - **Add more leads** to: **Add Users** for Static Segments only.

256. Campaigns and Journeys: Add these initial system Dynamic Segments:
    - All Trial Users
    - Active Trial Users
    - Trial Ending Soon
    - Trial Expired
    - Active Paid Users
    - Inactive Users
    - Calibration Incomplete
    - High Call Usage
    - Call Limit Reached
    - Payment Failed
    - Payment Method Update Required
    - Recently Upgraded
    - Recently Cancelled
257. Campaigns and Journeys: **High Call Usage** must allow the threshold to be configured by percentage. For example, allow:
    - 50%
    - 75%
    - 80%
    - 90%
    - 100%

    or a custom percentage.

258. Campaigns and Journeys: Do not require separate manually maintained Segments for each usage threshold. Allow the threshold to be part of the Segment rule.
259. Campaigns and Journeys: In **Lifecycle Journeys**, add a **Trigger Type** dropdown with only:
    - User Event
    - Enters Segment
    - Exits Segment
    - Date / Relative Date
260. Campaigns and Journeys: **User Event trigger dropdown:** include:
    - User Signed Up
    - Trial Started
    - Trial Ending Soon
    - Trial Expired
    - Trial Converted to Paid
    - Calibration Completed

- Calibration Not Completed
- First Call Completed
- Call Usage Threshold Reached
- Call Limit Reached
- Call Bundle Purchased
- Payment Succeeded
- Payment Failed
- Payment Method Update Required
- Subscription Started
- Plan Upgraded
- Plan Downgraded
- Subscription Renewed
- Subscription Cancelled
- User Became Inactive
- User Logged Back In

261. Campaigns and Journeys: For:
    - Trial Ending Soon
    - Calibration Not Completed
    - User Became Inactive

allow the admin to enter the time condition.

262. Campaigns and Journeys: Examples:
    - Trial ends in **3 days**
    - Calibration not completed within **24 hours**
    - No login for **7 days**
263. Campaigns and Journeys: For **Call Usage Threshold Reached**, allow the admin to enter:
    - Usage Percentage
264. Campaigns and Journeys: This must support journeys such as:
    - 80% calls used → send usage warning
    - 90% calls used → send stronger warning
    - 100% calls used → prompt purchase of additional calls
265. Campaigns and Journeys: Change Journey **Audience** so it can select:
    - All Eligible Users
    - Dynamic Segment
    - Static Segment
266. Campaigns and Journeys: Users who meet the Trigger/Audience rules must enter the Journey automatically.
267. Campaigns and Journeys: Add **Journey Re-entry** with only:
    - Never

- Every Time Trigger Occurs
- After X Days

268. Campaigns and Journeys: Add **Journey Exit Conditions**.
269. Campaigns and Journeys: Journey Exit Condition options must include:
    - Goal Completed
    - User Exits Segment
    - Plan Changed
    - Subscription Cancelled
    - Subscription Upgraded
    - Payment Succeeded
    - Custom User Event
270. Campaigns and Journeys: Before every delayed Journey email is sent, re-check the user's current state. Example: If a Trial Upgrade email is scheduled after 3 days but the user has already upgraded, do not send the email.
271. Campaigns and Journeys: In the Journey builder, change:
    - **Update Lead** to: **Update User Field**
272. Campaigns and Journeys: Change:
    - **Add Tag** to: **Add User Tag**
273. Campaigns and Journeys: Add:
    - **Remove User Tag**
274. Campaigns and Journeys: Keep these Journey step types:
    - Send Email
    - Wait
    - Condition
    - Update User Field
    - Add User Tag
    - Remove User Tag
    - End Journey
275. Campaigns and Journeys: For a **Condition** step, allow:
    - Event Occurred
    - Event Did Not Occur
    - User Is In Segment
    - User Is Not In Segment
    - Plan
    - Subscription Status
    - Trial Status
    - Call Usage %
    - Calibration Status
    - Payment Status
    - Email Opened

- Email Clicked
- Last Login

276. Campaigns and Journeys: Keep email opens and clicks as available conditions, but do not use them as the only Journey engagement triggers.
277. Campaigns and Journeys: In **Templates**, add a field:

- **Email Type**

278. Campaigns and Journeys: **Email Type dropdown:** only include:
    - Marketing
    - Lifecycle
    - Transactional
279. Campaigns and Journeys: Use **Transactional** for emails such as:
    - Payment Processed
    - Payment Failed
    - Update Payment Method
    - Subscription Confirmation
    - Subscription Cancellation Confirmation
    - Invoice / Receipt
280. Campaigns and Journeys: Use **Lifecycle** for emails such as:
    - Trial Welcome
    - Trial Ending Soon
    - Calibration Reminder
    - Inactive User Recovery
    - Usage Warning
    - Call Limit Reached
    - Upgrade Prompt
    - Feature Adoption
281. Campaigns and Journeys: Use **Marketing** for:
    - Product Announcements
    - Promotions
    - General Campaigns
    - Re-engagement marketing
282. Campaigns and Journeys: Change **New Template** so the first selection is:
    - **Creation Method**
283. Campaigns and Journeys: **Creation Method dropdown/options:** only include:
    - Build in PitchProX
    - Upload Design
    - Upload HTML
284. Campaigns and Journeys: **Upload Design** must support campaigns created in Canva.

285. Campaigns and Journeys: For **Upload Design**, allow:
    - PNG
    - JPG / JPEG
286. Campaigns and Journeys: Allow more than one image to be uploaded and stacked vertically in one email template.
287. Campaigns and Journeys: For every uploaded design image, add:
    - Alt Text
    - Destination Link (optional)
288. Campaigns and Journeys: Add an optional:
    - **CTA Button Below Design**

toggle.

289. Campaigns and Journeys: If CTA Button Below Design is ON, show:
    - Button Label
    - Destination URL
    - Button Style / Color
290. Campaigns and Journeys: Do not use PDF as the rendered body of an email campaign.
291. Campaigns and Journeys: **Upload HTML** must allow an admin to upload a complete HTML email file.
292. Campaigns and Journeys: For every template, regardless of Creation Method, include:
    - Template Name
    - Email Type
    - Category
    - Subject Line
    - Preheader
    - From Name
    - Reply-To Email
    - Email Body / Design
    - Status
293. Campaigns and Journeys: **Template Category dropdown:** only include:
    - Onboarding
    - Trial
    - Billing
    - Usage
    - Product
    - Retention
    - Account
    - Announcement

    - Promotional
294. Campaigns and Journeys: **Template Status:** only include:
- Draft
- Active
- Archived
295. Campaigns and Journeys: **Create Campaign** must include:
    - Campaign Name
    - Target Segment
    - Email Template
    - Send Option
    - Date / Time
296. Campaigns and Journeys: **Send Option:** only include:
    - Send Now
    - Schedule
297. Campaigns and Journeys: If send-time optimization is implemented later, make it an optional toggle:
    - **Optimize Send Time**
298. Campaigns and Journeys: Do not automatically apply send-time optimization to every campaign.
299. Campaigns and Journeys: Transactional emails must be able to send from system events without requiring a Broadcast Campaign. Example:
    - `payment_succeeded` → send Payment Processed template automatically.
300. Campaigns and Journeys: Keep **Broadcast Campaigns** and **Lifecycle Journeys** separate:
    - Broadcast Campaign = one-time/scheduled send
    - Lifecycle Journey = automated event/state-driven sequence
301. Campaigns and Journeys: Keep **Templates** reusable across both:
    - Broadcast Campaigns
    - Lifecycle Journeys
302. Campaigns and Journeys: Keep **Segments** reusable across both:
    - Broadcast Campaigns
    - Lifecycle Journeys
303.
